=PRESS RELEASE=

Numansdorp, June 11th 2009

Quick, Reliable and Cost effective: the Systemate *Swift*-Line

Systemate announces the worldwide introduction of the *Swift*-Line: A complete new concept in poultry processing, consisting of standard elements. The *Swift*-Line enables processors to arrange their processing plant according to their own needs and wishes, giving them full flexibility. With this straightforward modular concept, Systemate offers her customers the best possible solutions in poultry processing at a competitive price.

Successful concept

Systemate is worldwide renowned for its Compact Cut-up system, over 700 cut up systems are in operation in plants throughout the world. Based on this success, a new modular concept for the poultry processing department was developed, incorporating the many advantages of the renowned Compact System.

Swift Installation

The *Swift*-Line consists of 'plug & play' elements which can be installed in virtually any processing plant. Limited floorspace is required which is an advantage for processors with a smaller production plant. The line can be adapted and extended to the customers wishes as no overhead steel construction is required. All utilities are integrated in the overhead conveyor. This reduces installation time considerably, keeping production loss to an absolute minimum. Moreover, the line is compatible with existing systems.

Proven technology

The Systemate machines are of straightforward design, assuring an optimal product yield and hygiene. All equipment is made of stainless steel and other non-corrosive materials. Systemate is capable of meeting her customers highest standards. Systemate worldwide sales and service network gives full support 24 hours per day, 7 days per week.

Systemate.... always a step ahead
